What is Mooner Coin?

Mooner coin is a BEP20 Token (Binance Smart Chain). It was conceived as a technical specification on the Binance Smart Chain. MNR Token is the utility token to be used for all transactions on the Mooner Service Booking Application.

Cryptocurrency is the way of the future and has already shown significant uptake with millions of active users trading digital currencies on the Binance Exchange.

Why BEP20 (Binance Smart Chain)?

Binance Smart Chain is designed to give users faster block times and cheaper transaction costs.

Users will now be able to transfer:

- In a shorter time
- Surprisingly, low cost (gas price)
- Easier listing of MNR in Binance Exchange

Proof of Stake Consensus

Cryptocurrencies using Proof of Stake often start by selling pre-mined coins or they launch with the Proof of Work algorithm and later switch over to Proof of Stake.

Proof of Stake architectures allow the implementation of a scalability solution known as sharding without reducing security.

Tokenomics

Total Supply

100M
Tokens

Mooner LLP will issue fully functional BEP20 (Binance Smart Chain) utility tokens. The total supply of tokens will be limited to one hundred million MNR Tokens.

We will be executing a private token allocation event to raise funds for development and commercialization of the Mooner Application and its services.

The token allocation event will commence in the last quarter of 2020.
